EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

IN THE SPECIFICATION:

On page 3, line 6, "the in" has been deleted.

On page 3, line 16, "join" has been changed to --a joint--.

The above changes to the specification have been made to correct grammatical errors.

REASONS FOR ALLOWANCE

The instant invention is deemed to be directed to an unobvious improvement over the invention patented in U. S. Patent Nos. 5,169,522 to Shalon et al. and 3,747,479 to Nightingale et al. Shalon et al. discloses piston and scraper assembly for a chromatography column wherein the piston has a front, first face a cylindrical portion, a second, rear face and a through hole connecting said first face to said second face, and is provided with an annular groove of depth D1 mm in the cylindrical portion, the scraper is a ring having an L-shaped cross-section adapted to fit onto the piston, and the annular groove is provided with a resilient sealing locking and biasing means which extends from the annular groove.

The improvement comprises the scraper assembly having a complementary groove of depth D2 mm in an inner face to receive the resilient sealing, locking, and biasing means, in order to retain said scraper on said piston

Nightingale et al teaches for a piston and scraper assembly for a syringe or stopcock that has a complementary groove of depth D2 mm in an inner face to receive the resilient sealing, locking, and biasing means, in order to retain said scraper on said piston. Since the piston of Nightingale et al is not capable of being used in a chromatography column there is no motivation to combine Nightingale et al. with Shalon et al.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

PRIOR ART

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of six patents.

Laub et al., Thompson et al., Leavesley et al., Yamada et al., Baeckstrum, and Godbille et al. are cited to show chromatographic apparatus with pistons and seals.
